## Local & State News

### ◆ TBI ISSUES WARNING ON DRUGS

The Tennessee Bureau of Investigation has issued a public warning to recreational drug users after what the TBI calls "troubling" submissions to their drug lab. The TBI says several samples of cocaine submitted by police agencies in East and Middle Tennessee have also tested positive for fentanyl, a powerful narcotic pain killer. This is the first time samples of cocaine have tested positive in a TBI laboratory for fentanyl. In certain doses, fentanyl can be 50 to 100 times as potent as morphine. The drug does not necessarily need to be ingested to have an effect. It can be absorbed through the skin, so touching the substance can quickly put an individual at risk of opioid overdose and death. The TBI is investigating the origins of the submitted drug samples.
